

12/12/23 - OLED and Timeline

Spoke with Jeff (step-lad)

We talked about everything I've outlined so far. He made several suggestions involving tracking and displaying current weather. Much of it would be difficult to accomplish with current time constraints and knowledge, but it gave me an idea for the OLED. I will can create bitmaps to display current temp and precipitation conditions, similar to the weather channel. A sun if it's warm + dry, ~~snowfl~~ a winter jacket if it's cold + dry, a raincloud if it's warm + wet, a snowflake if it's cold + wet.

We also spoke about timeline and trying to do too much. He suggested to outline a "bare minimum" of what I would like to accomplish while leaving room for more if I have the time.
